

Host		Diagnosis	Confidence (to genus)			
Scientific Name	Common Name		Confirmed	Not Detected	Suspected	Inconclusive
		This section reports samples from all statuses. Each sample may have one or more diagnosis or identification; hence this section does not represent the total number of samples				

**Time Period Report for November 17<sup>th</sup> through November 23<sup>rd</sup>, 2015**

<i>Acer</i> sp./spp.	Maple	Additional Sample Requested (Identification Analysis)	1	0	0	0
<i>Buxus</i> sp./spp.	Boxwood	Boxwood Blight; Leaf and Stem Blight ( <i>Calonectria pseudonaviculata</i> )	1	1	0	0
<i>Buxus</i> sp./spp.	Boxwood	Colletotrichum Stem Decay ( <i>Colletotrichum</i> sp./spp.)	1	0	1	0
<i>Buxus</i> sp./spp.	Boxwood	Leaf Blight ( <i>Volutella buxi</i> )	1	0	0	0
<i>Buxus</i> sp./spp.	Boxwood	Unknown Abiotic Disorder (Abiotic disorder)	0	0	1	0
<i>Cryptomeria</i> sp./spp.	Cryptomeria	Pestalotiopsis Needle Blight; Tip Blight ( <i>Pestalotiopsis</i> sp./spp.)	1	0	0	0
<i>Cryptomeria</i> sp./spp.	Cryptomeria	Scale Insects (Order homoptera)	1	0	0	0
<i>Cryptomeria</i> sp./spp.	Cryptomeria	Transplant Shock; Stress (Abiotic disorder)	0	0	1	0
<i>Epipremnum aureum</i>	Devil's Ivy	High Soil Moisture (Abiotic disorder)	0	0	1	0
<i>Epipremnum aureum</i>	Devil's Ivy	Not Pathogen; Saprophyte (Secondary Agents; Saprophytes; Unspecif.)	1	0	0	0
<i>Picea abies</i>	Norway Spruce	Norway Spruce Shoot Gall Midge ( <i>Piceacecis abietiperda</i> )	0	0	1	0
<i>Picea abies</i>	Norway Spruce	Nutrient Imbalance (Abiotic disorder)	0	0	1	0

Confirmed - The diagnosis was derived using approved molecular technologies, serological testing and/or morphological observations which allowed for the confirmation of the organism to Genus, species and/or race or pathovar level.

Not Detected -The sample was submitted as a suspect sample or as part of survey project. The pathogen was not detected on this sample at this time using approved molecular technologies, serological testing and/or morphological observations.

Suspected - Diagnostic symptoms of the pathogen were present but evidence of the pathogen could not be confirmed at this time. This term may also be used at the species level if confirmations cannot be made. This term may also be used with abiotic entries.

Inconclusive - Although a suitable sample was received, a reliable result could not be achieved. For example, the test kit may have not worked correctly and there was no sample material remaining to perform the test again. Or, no DNA was detected in a PCR analysis. Inhibitors may have been present in the sample. A second attempt may have been made with the same results. The only conclusion is to label the sample as inconclusive.

Host		Diagnosis	Confidence (to genus)

This section reports samples from all statuses. Each sample may have one or more diagnosis or identification; hence this section does not represent the total number of samples

<i>Picea abies</i>	Norway Spruce	Scale Insects (Order homoptera)	1	0	0	0
<i>Picea pungens</i>	Blue Spruce	High Soil Moisture (Abiotic disorder)	0	0	1	0
<i>Picea pungens</i>	Blue Spruce	Root Damage (Abiotic disorder)	0	0	1	0
<i>Picea pungens</i>	Blue Spruce	Unspecified Pathology ( <i>Stigmina</i> sp./spp.)	1	0	0	0
<i>Pinus heldreichii</i>	Bosnian Pine	Diplodia Tip Blight; Canker ( <i>Diplodia sapinea</i> )	1	0	0	0
<i>Pinus heldreichii</i>	Bosnian Pine	Unknown Abiotic Disorder (Abiotic disorder)	0	0	1	0
<i>Poa pratensis</i>	Bluegrass; Kentucky	Curvularia Blight; Leaf Spot ( <i>Curvularia</i> sp./spp.)	1	0	0	0
<i>Poa pratensis</i>	Bluegrass; Kentucky	Drainage Problem (Abiotic disorder)	0	0	1	0
<i>Poa pratensis</i>	Bluegrass; Kentucky	Leptosphaerulina Leaf Spot ( <i>Leptosphaerulina</i> sp./spp.)	1	0	0	0
<i>Quercus falcata</i>	Red Oak	High Soil Moisture (Abiotic disorder)	0	0	1	0
<i>Quercus falcata</i>	Red Oak	No Pathogen Found (Identification Analysis)	1	0	0	0
<i>Rhododendron</i> sp./spp.	Azalea; Rhododendron	Crown and Root Rot ( <i>Phytophthora</i> sp./spp.)	0	1	0	0
<i>Rhododendron</i> sp./spp.	Azalea; Rhododendron	Dieback; Canker; Twig Blight ( <i>Botryosphaeria</i> sp./spp.)	0	0	1	0

**Confirmed** - The diagnosis was derived using approved molecular technologies, serological testing and/or morphological observations which allowed for the confirmation of the organism to Genus, species and/or race or pathovar level.

**Not Detected** -The sample was submitted as a suspect sample or as part of survey project. The pathogen was not detected on this sample at this time using approved molecular technologies, serological testing and/or morphological observations.

**Suspected** - Diagnostic symptoms of the pathogen were present but evidence of the pathogen could not be confirmed at this time. This term may also be used at the species level if confirmations cannot be made. This term may also be used with abiotic entries.

**Inconclusive** - Although a suitable sample was received, a reliable result could not be achieved. For example, the test kit may have not worked correctly and there was no sample material remaining to perform the test again. Or, no DNA was detected in a PCR analysis. Inhibitors may have been present in the sample. A second attempt may have been made with the same results. The only conclusion is to label the sample as inconclusive.
