

Host		Diagnosis	Confidence (to genus)			
Scientific Name	Common Name		Confirmed	Not Detected	Suspected	Inconclusive
		This section reports samples from all statuses. Each sample may have one or more diagnosis or identification; hence this section does not represent the total number of samples				

Time Period Report for December 12th through December 22nd, 2017

<i>Abies</i> sp./spp.	Fir	Additional sample requested (Identification Analysis)	1	0	0	0
<i>Abies</i> sp./spp.	Fir	Needle blight (Unidentified Agent)	0	0	1	0
<i>Abies</i> sp./spp.	Fir	Unspecified pathology (<i>Rhizosphaera</i> sp./spp.)	1	0	0	0
<i>Brassica oleracea acephala</i>	Kale	Pythium damping off (<i>Pythium</i> sp./spp.)	1	0	0	0
<i>Brassica oleracea acephala</i>	Kale	White mold (<i>Sclerotinia</i> sp./spp.)	1	0	0	0
<i>Brassica oleracea</i> var. <i>capitata</i>	Cabbage	Pythium damping off (<i>Pythium</i> sp./spp.)	1	0	0	0
<i>Brassica oleracea</i> var. <i>capitata</i>	Cabbage	Pythium root rot (<i>Pythium aphanidermatum</i>)	0	0	1	0
<i>Brassica pekinensis</i>	Napa; Chinese cabbage	Black rot (<i>Xanthomonas campestris</i>)	0	1	0	0
<i>Brassica pekinensis</i>	Napa; Chinese cabbage	Physiological responses (Abiotic disorder)	0	0	1	0
<i>Buxus</i> sp./spp.	Boxwood	Boxwood mite (<i>Eurytetranychus buxi</i>)	0	0	1	0

Confirmed - The diagnosis was derived using approved molecular technologies, serological testing and/or morphological observations which allowed for the confirmation of the organism to Genus, species and/or race or pathovar level.

Not Detected - The sample was submitted as a suspect sample or as part of survey project. The pathogen was not detected on this sample at this time using approved molecular technologies, serological testing and/or morphological observations.

Suspected - Diagnostic symptoms of the pathogen were present but evidence of the pathogen could not be confirmed at this time. This term may also be used at the species level if confirmations cannot be made. This term may also be used with abiotic entries.

Inconclusive - Although a suitable sample was received, a reliable result could not be achieved. For example, the test kit may have not worked correctly and there was no sample material remaining to perform the test again. Or, no DNA was detected in a PCR analysis. Inhibitors may have been present in the sample. A second attempt may have been made with the same results. The only conclusion is to label the sample as inconclusive.

Host		Diagnosis	Confidence (to genus)			
Scientific Name	Common Name		Confirmed	Not Detected	Suspected	Inconclusive
		This section reports samples from all statuses. Each sample may have one or more diagnosis or identification; hence this section does not represent the total number of samples				
<i>Buxus</i> sp./spp.	Boxwood	Herbicide injury; Exposure (Abiotic disorder)	0	0	1	0
<i>Buxus</i> sp./spp.	Boxwood	Unspecified pathology (<i>Fusarium</i> sp./spp.)	1	0	0	0
<i>Buxus</i> sp./spp.	Boxwood	Volutella leaf blight; Dieback (<i>Volutella</i> sp./spp.)	1	0	0	0
Family brassicaceae	Mustards	Pythium damping off (<i>Pythium</i> sp./spp.)	1	0	0	0
<i>Fuchsia</i> sp./spp.	Fuchsia	Growth regulator effect (Abiotic disorder)	0	0	2	0
<i>Fuchsia</i> sp./spp.	Fuchsia	Impatiens necrotic spot (INSV) (Tospovirus Impatiens Necrotic Spot Virus)	0	2	0	0
<i>Fuchsia</i> sp./spp.	Fuchsia	Thrips damage (Unidentified Thrips)	2	0	0	0
<i>Fuchsia</i> sp./spp.	Fuchsia	Tomato spotted wilt (TSWV) (Tospovirus Tomato Spotted Wilt Virus)	0	2	0	0
<i>Lycopersicon esculentum</i>	Tomato	Chemical injury (Abiotic disorder)	0	0	1	0
<i>Lycopersicon esculentum</i>	Tomato	No pathogen found (Identification Analysis)	1	0	0	0
<i>Lycopersicon esculentum</i>	Tomato	Powdery mildew (<i>Oidium</i> sp./spp.)	1	0	0	0
<i>Lycopersicon esculentum</i>	Tomato	Tomato russet mite (<i>Aculops lycopersici</i>)	0	0	2	0

Confirmed - The diagnosis was derived using approved molecular technologies, serological testing and/or morphological observations which allowed for the confirmation of the organism to Genus, species and/or race or pathovar level.

Not Detected -The sample was submitted as a suspect sample or as part of survey project. The pathogen was not detected on this sample at this time using approved molecular technologies, serological testing and/or morphological observations.

Suspected - Diagnostic symptoms of the pathogen were present but evidence of the pathogen could not be confirmed at this time. This term may also be used at the species level if confirmations cannot be made. This term may also be used with abiotic entries.

Inconclusive - Although a suitable sample was received, a reliable result could not be achieved. For example, the test kit may have not worked correctly and there was no sample material remaining to perform the test again. Or, no DNA was detected in a PCR analysis. Inhibitors may have been present in the sample. A second attempt may have been made with the same results. The only conclusion is to label the sample as inconclusive.

Host		Diagnosis This section reports samples from all statuses. Each sample may have one or more diagnosis or identification; hence this section does not represent the total number of samples	Confidence (to genus)			
Scientific Name	Common Name		Confirmed	Not Detected	Suspected	Inconclusive
<i>Senecio</i> sp./spp.	Groundsels	Stem rot (<i>Botrytis</i> sp./spp.)	1	0	0	0
<i>Senecio</i> sp./spp.	Groundsels	Unspecified pathology (<i>Rhizoctonia</i> sp./spp.)	1	0	0	0
<i>Senecio</i> sp./spp.	Groundsels	Wound canker (Abiotic disorder)	0	0	1	0

Confirmed - The diagnosis was derived using approved molecular technologies, serological testing and/or morphological observations which allowed for the confirmation of the organism to Genus, species and/or race or pathovar level.

Not Detected -The sample was submitted as a suspect sample or as part of survey project. The pathogen was not detected on this sample at this time using approved molecular technologies, serological testing and/or morphological observations.

Suspected - Diagnostic symptoms of the pathogen were present but evidence of the pathogen could not be confirmed at this time. This term may also be used at the species level if confirmations cannot be made. This term may also be used with abiotic entries.

Inconclusive - Although a suitable sample was received, a reliable result could not be achieved. For example, the test kit may have not worked correctly and there was no sample material remaining to perform the test again. Or, no DNA was detected in a PCR analysis. Inhibitors may have been present in the sample. A second attempt may have been made with the same results. The only conclusion is to label the sample as inconclusive.
