

Host		Diagnosis	Confidence (to genus)			
Scientific Name	Common Name		Confirmed	Not Detected	Suspected	Inconclusive
		This section reports samples from all statuses. Each sample may have one or more diagnosis or identification; hence this section does not represent the total number of samples				

Time Period Report for May 23rd through May 29th, 2017

Scientific Name	Common Name	Diagnosis	Confirmed	Not Detected	Suspected	Inconclusive
<i>Brassica juncea</i>	Indian Mustard	Pythium damping off (<i>Pythium</i> sp./spp.)	1	0	0	0
<i>Brassica juncea</i>	Indian Mustard	Pythium root rot (<i>Pythium aphanidermatum</i>)	0	0	1	0
<i>Brassica oleracea</i> var. <i>botrytis</i>	Broccoli	Pythium damping off (<i>Pythium</i> sp./spp.)	0	1	0	0
<i>Fragaria x ananassa</i>	Commercial Strawberry; garden strawberry	Additional sample requested (Identification Analysis)	1	0	0	0
<i>Fragaria x ananassa</i>	Commercial Strawberry; garden strawberry	Crown and root rot (<i>Phytophthora</i> sp./spp.)	0	1	0	0
<i>Pelargonium</i> sp./spp.	Geranium (cultivated)	Cucumber mosaic (CMV) (Cucumovirus Cucumber Mosaic Virus)	0	1	0	0
<i>Pelargonium</i> sp./spp.	Geranium (cultivated)	Impatiens necrotic spot (INSV) (Tospovirus Impatiens Necrotic Spot Virus)	0	1	0	0
<i>Pelargonium</i> sp./spp.	Geranium (cultivated)	Pelargonium flower break (PFBV) (Alphacarmovirus Pelargonium Flower Break Virus)	0	1	0	0
<i>Pelargonium</i> sp./spp.	Geranium (cultivated)	Potyvirus Group (Potyvirus sp./spp.)	0	1	0	0

Confirmed - The diagnosis was derived using approved molecular technologies, serological testing and/or morphological observations which allowed for the confirmation of the organism to Genus, species and/or race or pathovar level.

Not Detected -The sample was submitted as a suspect sample or as part of survey project. The pathogen was not detected on this sample at this time using approved molecular technologies, serological testing and/or morphological observations.

Suspected - Diagnostic symptoms of the pathogen were present but evidence of the pathogen could not be confirmed at this time. This term may also be used at the species level if confirmations cannot be made. This term may also be used with abiotic entries.

Inconclusive - Although a suitable sample was received, a reliable result could not be achieved. For example, the test kit may have not worked correctly and there was no sample material remaining to perform the test again. Or, no DNA was detected in a PCR analysis. Inhibitors may have been present in the sample. A second attempt may have been made with the same results. The only conclusion is to label the sample as inconclusive.

Host		Diagnosis	Confidence (to genus)			
Scientific Name	Common Name		Confirmed	Not Detected	Suspected	Inconclusive
		This section reports samples from all statuses. Each sample may have one or more diagnosis or identification; hence this section does not represent the total number of samples				
<i>Pelargonium</i> sp./spp.	Geranium (cultivated)	Tomato spotted wilt (TSWV) (Tospovirus Tomato Spotted Wilt Virus)	0	1	0	0
<i>Pelargonium</i> sp./spp.	Geranium (cultivated)	Unknown abiotic disorder (Abiotic disorder)	0	0	1	0
<i>Picea pungens</i>	Blue Spruce	Weir's cushion rust (<i>Chrysomyxa weirii</i>)	1	0	1	0
<i>Platanus x acerifolia</i>	London Planetree	Additional sample requested (Identification Analysis)	1	0	0	0
<i>Platanus x acerifolia</i>	London Planetree	Branch canker; Massaria (<i>Splanchnonema platani</i>)	1	0	2	0
<i>Quercus</i> sp./spp.	Oak	Insect damage (Unidentified Insect)	0	0	1	0
<i>Quercus</i> sp./spp.	Oak	Referred to specialist (Identification Analysis)	1	0	0	0
<i>Quercus</i> sp./spp.	Oak	Scale insects (Order Homoptera)	1	0	0	0
<i>Quercus</i> sp./spp.	Oak	Wood decay fungus (Unidentified Fungus)	0	0	1	0
<i>Raphanus sativus</i>	Radish	Pythium damping off (<i>Pythium</i> sp./spp.)	0	1	0	0
<i>Thlaspi arvense</i>	Field Pennycress	Black spot (<i>Alternaria</i> sp./spp.)	1	0	0	0

Confirmed - The diagnosis was derived using approved molecular technologies, serological testing and/or morphological observations which allowed for the confirmation of the organism to Genus, species and/or race or pathovar level.

Not Detected -The sample was submitted as a suspect sample or as part of survey project. The pathogen was not detected on this sample at this time using approved molecular technologies, serological testing and/or morphological observations.

Suspected - Diagnostic symptoms of the pathogen were present but evidence of the pathogen could not be confirmed at this time. This term may also be used at the species level if confirmations cannot be made. This term may also be used with abiotic entries.

Inconclusive - Although a suitable sample was received, a reliable result could not be achieved. For example, the test kit may have not worked correctly and there was no sample material remaining to perform the test again. Or, no DNA was detected in a PCR analysis. Inhibitors may have been present in the sample. A second attempt may have been made with the same results. The only conclusion is to label the sample as inconclusive.
