

Host		Diagnosis	Confidence (to genus)			
Scientific Name	Common Name		Confirmed	Not Detected	Suspected	Inconclusive
		This section reports samples from all statuses. Each sample may have one or more diagnosis or identification; hence this section does not represent the total number of samples				

Time Period Report for May 2nd through May 8th, 2017

<i>Allium cepa</i>	Onion	Fusarium dry rot; Bulb rot (<i>Fusarium</i> sp./spp.)	0	0	4	0
<i>Allium cepa</i>	Onion	Pink root (<i>Setophoma terrestris</i>)	4	0	0	0
<i>Buxus</i> sp./spp.	Boxwood	Crown rot; Root rot; Stem rot (<i>Phytophthora</i> sp./spp.)	0	1	0	0
<i>Nicotiana benthamiana</i>	Nicotiana	Impatiens necrotic spot (INSV) (Tospovirus Impatiens Necrotic Spot Virus)	1	0	0	0
<i>Picea abies</i>	Norway Spruce	Mechanical damage (Abiotic disorder)	0	0	1	0
<i>Picea abies</i>	Norway Spruce	Unknown abiotic disorder (Abiotic disorder)	0	0	1	0
<i>Picea pungens</i>	Blue Spruce	Scale insects (Order Homoptera)	2	0	0	0
<i>Picea pungens</i>	Blue Spruce	Stigmata needle blight (<i>Stigmata lautii</i>)	1	0	0	0
<i>Picea pungens</i>	Blue Spruce	Unknown abiotic disorder (Abiotic disorder)	0	0	1	0
<i>Picea pungens</i>	Blue Spruce	Unspecified pathology (<i>Setomelanomma holmii</i>)	1	0	0	0
<i>Picea pungens</i>	Blue Spruce	Unspecified pathology (<i>Stigmata</i> sp./spp.)	1	0	0	0
<i>Pinus cembra</i>	Swiss Stone pine	Red band needle blight (<i>Dothistroma septosporum</i>)	1	0	0	0
<i>Prunus</i> sp./spp.	Flowering Cherry	Non-pathogenic; Saprophyte (Secondary Agents; Saprophytes; Unspecif.)	1	0	0	0

Confirmed - The diagnosis was derived using approved molecular technologies, serological testing and/or morphological observations which allowed for the confirmation of the organism to Genus, species and/or race or pathovar level.

Not Detected -The sample was submitted as a suspect sample or as part of survey project. The pathogen was not detected on this sample at this time using approved molecular technologies, serological testing and/or morphological observations.

Suspected - Diagnostic symptoms of the pathogen were present but evidence of the pathogen could not be confirmed at this time. This term may also be used at the species level if confirmations cannot be made. This term may also be used with abiotic entries.

Inconclusive - Although a suitable sample was received, a reliable result could not be achieved. For example, the test kit may have not worked correctly and there was no sample material remaining to perform the test again. Or, no DNA was detected in a PCR analysis. Inhibitors may have been present in the sample. A second attempt may have been made with the same results. The only conclusion is to label the sample as inconclusive.

Host		Diagnosis	Confidence (to genus)			
Scientific Name	Common Name		Confirmed	Not Detected	Suspected	Inconclusive
		This section reports samples from all statuses. Each sample may have one or more diagnosis or identification; hence this section does not represent the total number of samples				
<i>Prunus sp./spp.</i>	Flowering Cherry	Root damage (Abiotic disorder)	0	0	1	0
<i>Prunus sp./spp.</i>	Flowering Cherry	Winter injury (Abiotic disorder)	0	0	1	0
<i>Pyrus calleryana</i>	Callery Pear	Moisture stress (Abiotic disorder)	0	0	1	0
<i>Pyrus calleryana</i>	Callery Pear	Non-pathogenic; Saprophyte (Secondary Agents; Saprophytes; Unspecif.)	1	0	0	0
<i>Pyrus calleryana</i>	Callery Pear	Root damage (Abiotic disorder)	0	0	1	0
<i>Viburnum sp./spp.</i>	Viburnum	Crown rot; Root rot; Stem rot (<i>Phytophthora sp./spp.</i>)	1	0	0	0

Confirmed - The diagnosis was derived using approved molecular technologies, serological testing and/or morphological observations which allowed for the confirmation of the organism to Genus, species and/or race or pathovar level.

Not Detected -The sample was submitted as a suspect sample or as part of survey project. The pathogen was not detected on this sample at this time using approved molecular technologies, serological testing and/or morphological observations.

Suspected - Diagnostic symptoms of the pathogen were present but evidence of the pathogen could not be confirmed at this time. This term may also be used at the species level if confirmations cannot be made. This term may also be used with abiotic entries.

Inconclusive - Although a suitable sample was received, a reliable result could not be achieved. For example, the test kit may have not worked correctly and there was no sample material remaining to perform the test again. Or, no DNA was detected in a PCR analysis.
