

Host		Diagnosis	Confidence (to genus)			
Scientific Name	Common Name		Confirmed	Not Detected	Suspected	Inconclusive
		This section reports samples from all statuses. Each sample may have one or more diagnosis or identification; hence this section does not represent the total number of samples				

Time Period Report for June 6th through June 12th, 2017

Scientific Name	Common Name	Diagnosis	Confirmed	Not Detected	Suspected	Inconclusive
<i>Abies concolor</i>	White Fir	Herbicide injury; Exposure (Abiotic disorder)	0	0	1	0
<i>Abies concolor</i>	White Fir	No pathogen found (Identification Analysis)	1	0	0	0
<i>Allium cepa</i>	Onion	No pathogen found (Identification Analysis)	1	0	0	0
<i>Allium cepa</i>	Onion	Plant parasitic nematodes (Family Tylenchidae)	0	1	0	0
<i>Allium cepa</i>	Onion	Unknown abiotic disorder (Abiotic disorder)	0	0	1	0
<i>Canis familiaris</i>	Dog	Haymaker's mushroom (<i>Panaeolina foenisecii</i>)	1	0	0	0
<i>Fagus sylvatica</i>	European Beech	Additional sample requested (Identification Analysis)	1	0	0	0
<i>Lactuca sativa</i>	Lettuce	Downy mildew (Lettuce) (<i>Bremia lactucae</i>)	0	1	0	0
<i>Lactuca sativa</i>	Lettuce	Unidentified bacteria (Unidentified Bacteria)	1	0	0	0
<i>Lycopersicon esculentum</i>	Tomato	Cucumber mosaic (CMV) (Cucumovirus Cucumber Mosaic Virus)	0	1	0	0
<i>Lycopersicon esculentum</i>	Tomato	Herbicide injury; Exposure (Abiotic disorder)	0	0	1	0
<i>Lycopersicon esculentum</i>	Tomato	Tobacco mosaic (TMV) (Tobamovirus Tobacco Mosaic Virus)	0	1	0	0
<i>Malus sylvestris</i>	Common Apple	Aphis aphids (Aphis sp./spp.)	1	0	0	0

Confirmed - The diagnosis was derived using approved molecular technologies, serological testing and/or morphological observations which allowed for the confirmation of the organism to Genus, species and/or race or pathovar level.

Not Detected -The sample was submitted as a suspect sample or as part of survey project. The pathogen was not detected on this sample at this time using approved molecular technologies, serological testing and/or morphological observations.

Suspected - Diagnostic symptoms of the pathogen were present but evidence of the pathogen could not be confirmed at this time. This term may also be used at the species level if confirmations cannot be made. This term may also be used with abiotic entries.

Inconclusive - Although a suitable sample was received, a reliable result could not be achieved. For example, the test kit may have not worked correctly and there was no sample material remaining to perform the test again. Or, no DNA was detected in a PCR analysis. Inhibitors may have been present in the sample. A second attempt may have been made with the same results. The only conclusion is to label the sample as inconclusive.

Host		Diagnosis	Confidence (to genus)			
Scientific Name	Common Name		Confirmed	Not Detected	Suspected	Inconclusive
		This section reports samples from all statuses. Each sample may have one or more diagnosis or identification; hence this section does not represent the total number of samples				
<i>Malus sylvestris</i>	Common Apple	No pathogen found (Identification Analysis)	1	0	0	0
<i>Picea abies</i>	Norway Spruce	No pathogen found (Identification Analysis)	1	0	0	0
<i>Picea abies</i>	Norway Spruce	Root damage (Abiotic disorder)	0	0	1	0
<i>Picea abies</i>	Norway Spruce	Spruce spider mite (<i>Oligonychus ununguis</i>)	0	0	1	0
<i>Picea pungens glauca</i>	Kosters Blue spruce	Cytospora canker; Dieback (<i>Cytospora</i> sp./spp.)	0	1	0	0
<i>Picea pungens glauca</i>	Kosters Blue spruce	Pitch mass borer (<i>Synanthedon pini</i>)	0	0	1	0
<i>Rhododendron</i> sp./spp.	Rhododendron	Black vine weevil (<i>Otiorhynchus sulcatus</i>)	0	0	1	0
<i>Rhododendron</i> sp./spp.	Rhododendron	Root damage (Abiotic disorder)	0	0	1	0
<i>Rhododendron</i> sp./spp.	Azalea; Rhododendron	Aerial stem blight (<i>Phytophthora</i> sp./spp.)	0	1	0	0
<i>Rhododendron</i> sp./spp.	Azalea; Rhododendron	Dieback; Canker; Twig blight (<i>Botryosphaeria</i> sp./spp.)	1	0	0	0
<i>Rhododendron</i> sp./spp.	Azalea; Rhododendron	Root damage (Abiotic disorder)	0	0	1	0

Confirmed - The diagnosis was derived using approved molecular technologies, serological testing and/or morphological observations which allowed for the confirmation of the organism to Genus, species and/or race or pathovar level.

Not Detected -The sample was submitted as a suspect sample or as part of survey project. The pathogen was not detected on this sample at this time using approved molecular technologies, serological testing and/or morphological observations.

Suspected - Diagnostic symptoms of the pathogen were present but evidence of the pathogen could not be confirmed at this time. This term may also be used at the species level if confirmations cannot be made. This term may also be used with abiotic entries.

Inconclusive - Although a suitable sample was received, a reliable result could not be achieved. For example, the test kit may have not worked correctly and there was no sample material remaining to perform the test again. Or, no DNA was detected in a PCR analysis. Inhibitors may have been present in the sample. A second attempt may have been made with the same results. The only conclusion is to label the sample as inconclusive.

Host		Diagnosis	Confidence (to genus)			
Scientific Name	Common Name		Confirmed	Not Detected	Suspected	Inconclusive
		This section reports samples from all statuses. Each sample may have one or more diagnosis or identification; hence this section does not represent the total number of samples				
<i>Syringa vulgaris</i>	Common Lilac	Bacterial blight (<i>Pseudomonas syringae syringae</i>)	0	0	1	0
<i>Syringa vulgaris</i>	Common Lilac	Blight (<i>Ascochyta syringae</i>)	1	0	0	0
<i>Ulmus americana</i>	American Elm	Non-pathogenic; Saprophyte (Secondary Agents; Saprophytes; Unspecif.)	2	0	0	0
<i>Viburnum</i> sp./spp.	Viburnum	Aerial stem blight (<i>Phytophthora</i> sp./spp.)	0	1	0	0
<i>Viburnum</i> sp./spp.	Viburnum	Root damage (Abiotic disorder)	0	0	1	0

Confirmed - The diagnosis was derived using approved molecular technologies, serological testing and/or morphological observations which allowed for the confirmation of the organism to Genus, species and/or race or pathovar level.

Not Detected -The sample was submitted as a suspect sample or as part of survey project. The pathogen was not detected on this sample at this time using approved molecular technologies, serological testing and/or morphological observations.
