

Host		Diagnosis	Confidence (to genus)			
Scientific Name	Common Name		Confirmed	Not Detected	Suspected	Inconclusive
		This section reports samples from all statuses. Each sample may have one or more diagnosis or identification; hence this section does not represent the total number of samples				

**Time Period Report for August 15<sup>th</sup> through August 21<sup>st</sup>, 2017**

		Time Period Report for August 15 <sup>th</sup> through August 21 <sup>st</sup> , 2017				
<i>Acer</i> sp./spp.	Maple	Powdery mildew ( <i>Oidium</i> sp./spp.)	1	0	0	0
<i>Capsicum annuum grossum</i>	Bell Pepper	Broad mite ( <i>Polyphagotarsonemus latus</i> )	1	0	0	0
<i>Capsicum annuum grossum</i>	Bell Pepper	Cucumber mosaic (CMV) (Cucumovirus Cucumber Mosaic Virus)	0	1	0	0
<i>Capsicum annuum grossum</i>	Bell Pepper	Thrips (Order Thysanoptera)	0	1	0	0
<i>Cedrus atlantica glauca</i>	Blue Atlas cedar	Root damage (Abiotic disorder)	0	0	1	0
<i>Cedrus atlantica glauca</i>	Blue Atlas cedar	Sirococcus twig blight ( <i>Sirococcus</i> sp./spp.)	0	1	0	0
<i>Cedrus atlantica glauca</i>	Blue Atlas cedar	Tip blight ( <i>Diplodia</i> sp./spp.)	0	1	0	0
<i>Cedrus atlantica glauca</i>	Blue Atlas cedar	Unspecified pathology ( <i>Rhizosphaera</i> sp./spp.)	1	0	0	0
<i>Gleditsia triacanthos</i>	Common Honeylocust	Cercospora leaf spot ( <i>Cercospora</i> sp./spp.)	1	0	0	0
<i>Gleditsia triacanthos</i>	Common Honeylocust	Spider mites (Family Tetranychidae)	1	0	0	0

Confirmed - The diagnosis was derived using approved molecular technologies, serological testing and/or morphological observations which allowed for the confirmation of the organism to Genus, species and/or race or pathovar level.

Not Detected -The sample was submitted as a suspect sample or as part of survey project. The pathogen was not detected on this sample at this time using approved molecular technologies, serological testing and/or morphological observations.

Suspected - Diagnostic symptoms of the pathogen were present but evidence of the pathogen could not be confirmed at this time. This term may also be used at the species level if confirmations cannot be made. This term may also be used with abiotic entries.

Inconclusive - Although a suitable sample was received, a reliable result could not be achieved. For example, the test kit may have not worked correctly and there was no sample material remaining to perform the test again. Or, no DNA was detected in a PCR analysis. Inhibitors may have been present in the sample. A second attempt may have been made with the same results. The only conclusion is to label the sample as inconclusive.

Host		Diagnosis	Confidence (to genus)			
Scientific Name	Common Name		Confirmed	Not Detected	Suspected	Inconclusive
		This section reports samples from all statuses. Each sample may have one or more diagnosis or identification; hence this section does not represent the total number of samples				
<i>Gleditsia triacanthos</i>	Common Honeylocust	Unknown abiotic disorder (Abiotic disorder)	0	0	1	0
<i>Hordeum sp./spp.</i>	Barley	Referred to specialist (Identification Analysis)	1	0	0	0
<i>Hordeum sp./spp.</i>	Barley	Spot blotch ( <i>Bipolaris sorokiniana</i> )	1	0	0	0
<i>Hordeum sp./spp.</i>	Barley	Straw itch mite ( <i>Pyemotes tritici</i> )	0	0	1	0
<i>Hordeum sp./spp.</i>	Barley	Ergot ( <i>Claviceps sp./spp.</i> )	1	0	0	0
<i>Hydrangea quercifolia</i>	Oakleaf Hydrangea	Bacterial leaf spot ( <i>Xanthomonas campestris</i> )	1	0	0	0
<i>Juniperus sp./spp.</i>	Juniper	Dieback; Canker; Twig blight ( <i>Botryosphaeria sp./spp.</i> )	1	0	0	0
<i>Juniperus sp./spp.</i>	Juniper	Unknown abiotic disorder (Abiotic disorder)	0	0	1	0
<i>Picea pungens fastigiata</i>	Colorado Blue spruce	Cytospora canker; Dieback ( <i>Cytospora sp./spp.</i> )	0	1	0	0
<i>Picea pungens fastigiata</i>	Colorado Blue spruce	Excessive mulch (Abiotic disorder)	0	0	1	0
<i>Picea pungens fastigiata</i>	Colorado Blue spruce	High soil moisture (Abiotic disorder)	0	0	1	0
<i>Picea pungens fastigiata</i>	Colorado Blue spruce	Unspecified pathology ( <i>Stigmina sp./spp.</i> )	1	0	0	0

Confirmed - The diagnosis was derived using approved molecular technologies, serological testing and/or morphological observations which allowed for the confirmation of the organism to Genus, species and/or race or pathovar level.

Not Detected -The sample was submitted as a suspect sample or as part of survey project. The pathogen was not detected on this sample at this time using approved molecular technologies, serological testing and/or morphological observations.

Suspected - Diagnostic symptoms of the pathogen were present but evidence of the pathogen could not be confirmed at this time. This term may also be used at the species level if confirmations cannot be made. This term may also be used with abiotic entries.

Inconclusive - Although a suitable sample was received, a reliable result could not be achieved. For example, the test kit may have not worked correctly and there was no sample material remaining to perform the test again. Or, no DNA was detected in a PCR analysis. Inhibitors may have been present in the sample. A second attempt may have been made with the same results. The only conclusion is to label the sample as inconclusive.

Host		Diagnosis	Confidence (to genus)			
Scientific Name	Common Name		Confirmed	Not Detected	Suspected	Inconclusive
<i>Prunus cerasifera atropurpurea</i>	Purpleleaf Plum	Black knot ( <i>Apiosporina morbosa</i> )	1	0	0	0
<i>Quercus sp./spp.</i>	Oak	Anthracnose ( <i>Discula quercina</i> )	1	0	0	0
<i>Quercus sp./spp.</i>	Oak	Jumping oak gall wasp ( <i>Neuroterus saltatorius</i> )	1	0	0	0
<i>Quercus sp./spp.</i>	Oak	Leaf spot ( <i>Tubakia dryina</i> )	1	0	0	0
<i>Quercus sp./spp.</i>	Oak	Spider mites (Family Tetranychidae)	1	0	0	0
<i>Quercus sp./spp.</i>	Oak	Transplant shock; Stress (Abiotic disorder)	0	0	1	0
<i>Schizachyrium scoparium</i>	Little Bluestem	Tangle top ( <i>Myriogenospora atramentosa</i> )	1	0	0	0
<i>Tiarella sp./spp.</i>	Foamflower	Black root rot ( <i>Thielaviopsis basicola</i> )	1	0	0	0
<i>Tiarella sp./spp.</i>	Foamflower	High soil moisture (Abiotic disorder)	0	0	1	0
<i>Tiarella sp./spp.</i>	Foamflower	Unspecified pathology ( <i>Colletotrichum sp./spp.</i> )	1	0	0	0
<i>Tsuga canadensis</i>	Eastern Hemlock	High soil moisture (Abiotic disorder)	0	0	1	0

Confirmed - The diagnosis was derived using approved molecular technologies, serological testing and/or morphological observations which allowed for the confirmation of the organism to Genus, species and/or race or pathovar level.

Not Detected -The sample was submitted as a suspect sample or as part of survey project. The pathogen was not detected on this sample at this time using approved molecular technologies, serological testing and/or morphological observations.

Suspected - Diagnostic symptoms of the pathogen were present but evidence of the pathogen could not be confirmed at this time. This term may also be used at the species level if confirmations cannot be made. This term may also be used with abiotic entries.

Inconclusive - Although a suitable sample was received, a reliable result could not be achieved. For example, the test kit may have not worked correctly and there was no sample material remaining to perform the test again. Or, no DNA was detected in a PCR analysis.
