

Host		Diagnosis	Confidence (to genus)			
Scientific Name	Common Name		Confirmed	Not Detected	Suspected	Inconclusive
		This section reports samples from all statuses. Each sample may have one or more diagnosis or identification; hence this section does not represent the total number of samples				

Time Period Report for July 10th through July 16th 2018

Scientific Name	Common Name	Diagnosis	Confirmed	Not Detected	Suspected	Inconclusive
<i>Abies balsamea</i>	Balsam Fir	Moisture stress (Abiotic disorder)	0	0	1	0
<i>Abies balsamea</i>	Balsam Fir	No pathogen found (Identification Analysis)	1	0	0	0
<i>Abies concolor</i>	White Fir	Additional sample requested (Identification Analysis)	1	0	0	0
<i>Abies concolor</i>	White Fir	Needle cast (Unidentified Agent)	0	1	0	0
<i>Abies concolor</i>	White Fir	Pine weevils (Family Curculionidae)	0	0	1	0
<i>Agrostis</i> sp./spp.	Bentgrass	Anthracnose (<i>Colletotrichum</i> sp./spp.)	1	0	0	0
<i>Agrostis</i> sp./spp.	Bentgrass	Heat stress (Abiotic disorder)	0	0	1	0
<i>Agrostis</i> sp./spp.	Bentgrass	Pythium root and/or crown rot (<i>Pythium</i> sp./spp.)	0	0	1	0
<i>Avena sativa</i>	Oats	Crown rust; Rust (<i>Puccinia coronata</i>)	2	0	0	0
<i>Cornus florida</i>	Flowering Dogwood	Brown felt (<i>Septobasidium</i> sp./spp.)	1	0	0	0
<i>Dahlia</i> sp./spp.	Dahlia	Tomato spotted wilt (TSWV) (Tospovirus Tomato Spotted Wilt Virus)	2	0	0	0
<i>Lilium</i> sp./spp.	Lily	Rhizoctonia root rot (<i>Rhizoctonia</i> sp./spp.)	1	0	0	0
<i>Malus domestica</i>	Domestic Apple	Mucor fruit rot (<i>Mucor</i> sp./spp.)	1	0	0	0
<i>Pinus resinosa</i>	Red Pine	Environmental stress; Problem (Abiotic disorder)	0	0	1	0

Confirmed - The diagnosis was derived using approved molecular technologies, serological testing and/or morphological observations which allowed for the confirmation of the organism to Genus, species and/or race or pathovar level.

Not Detected -The sample was submitted as a suspect sample or as part of survey project. The pathogen was not detected on this sample at this time using approved molecular technologies, serological testing and/or morphological observations.

Suspected - Diagnostic symptoms of the pathogen were present but evidence of the pathogen could not be confirmed at this time. This term may also be used at the species level if confirmations cannot be made. This term may also be used with abiotic entries.

Inconclusive - Although a suitable sample was received, a reliable result could not be achieved. For example, the test kit may have not worked correctly and there was no sample material remaining to perform the test again. Or, no DNA was detected in a PCR analysis. Inhibitors may have been present in the sample. A second attempt may have been made with the same results. The only conclusion is to label the sample as inconclusive.

Host		Diagnosis	Confidence (to genus)			
Scientific Name	Common Name		Confirmed	Not Detected	Suspected	Inconclusive
		This section reports samples from all statuses. Each sample may have one or more diagnosis or identification; hence this section does not represent the total number of samples				
<i>Pinus resinosa</i>	Red Pine	Insect damage (Unidentified Insect)	1	0	0	0
<i>Pinus resinosa</i>	Red Pine	Non-pathogenic; Saprophyte (Secondary Agents; Saprophytes; Unspecif.)	1	0	0	0
<i>Pinus strobus</i>	Eastern White pine	Blue stain (<i>Ceratocystis</i> sp./spp.)	1	0	0	0
<i>Pyrus</i> sp./spp.	Pear (ornamental)	Fire blight (<i>Erwinia amylovora</i>)	0	1	0	0
<i>Pyrus</i> sp./spp.	Pear (ornamental)	Non-pathogenic; Saprophyte (Secondary Agents; Saprophytes; Unspecif.)	1	0	0	0
<i>Pyrus</i> sp./spp.	Pear (ornamental)	Unknown abiotic disorder (Abiotic disorder)	0	0	1	0

Confirmed - The diagnosis was derived using approved molecular technologies, serological testing and/or morphological observations which allowed for the confirmation of the organism to Genus, species and/or race or pathovar level.

Not Detected -The sample was submitted as a suspect sample or as part of survey project. The pathogen was not detected on this sample at this time using approved molecular technologies, serological testing and/or morphological observations.

Suspected - Diagnostic symptoms of the pathogen were present but evidence of the pathogen could not be confirmed at this time. This term may also be used at the species level if confirmations cannot be made. This term may also be used with abiotic entries.

Inconclusive - Although a suitable sample was received, a reliable result could not be achieved. For example, the test kit may have not worked correctly and there was no sample material remaining to perform the test again. Or, no DNA was detected in a PCR analysis.
